 Lucknow (U.P.)

Sub: Incidence of glanders in a horse at Bareilly (UP)-reg
 Sir,

This is with reference to letter no.2851-C/Lab Date 3/11/16 from Dr.G.N.Singh, Additional Director Grade-2, Bareilly-U.P. sending us samples for glanders testing, One serum sample CL No.-16 from horse stallion, 2.5yrs, colour Piebald, was found positive for Glanders, two samples having circle lab no. (CL-9 & CL-17) require repeat sampling for retesting (list enclosed). Additionally four samples sent along with above mentioned letter for retesting (repeat) were found to be negative. **Necessary actions under the provisions of Infectious Diseases Act 2009 (Prevention and Control of Infectious and Contagious Disease in Animals Act 2009) in vogue in the State may be taken immediately.** The equines housed with glanders positive horse in the same premises may be monitored for the disease by serological testing under strict supervision of the veterinary authority and must also be segregated immediately.

In light of this result and viewing the lingering of this notifiable disease in Uttar Pradesh, it is recommended that equine movement to and from this and adjoining areas be regulated strictly and to take necessary precautions and zoonosanitary measures to prevent further spread of the disease on top priority. The equines in adjoining areas may also be tested for glanders. NRCE being the referral laboratory of Department of Animal Husbandry, Dairying and Fisheries, MOA, & Framers Welfare GOI, is available to help by providing the testing services on priority, please.

Action (s) taken and disease situation amongst equines in the area may be monitored and intimated at regular intervals.

Yours faithfully,

(B.N. Tripathi)
